Wichita Community Clinical Oncology Program (WCCOP)
929 N. St. Francis
Wichita, KS 67214
316.268.5784 or 800.362.5784
Funded by the National Institute for Health, headquartered at Via Christi Hospital St. Francis. Local partner for national clinical trials and preventive studies.

Winfield Cancer Center
1305 E. 5th Ave.
Winfield, KS 67156
620.221.2900
Outpatient medical and radiation therapy services, provided in partnership with William Newton Memorial Hospital and Cancer Center of Kansas.

On the cover: Stephanie Rader participates in the Susan G. Komen Race for the Cure.

During her cancer treatment, Stephanie participated in two separate clinical trials to aid those tirelessly searching for relief from side effects — for herself and for future patients.

“I’m benefitting ... from all the women who agreed to do clinical trials in the past, so I’m glad to have the opportunity to pay it forward,” says Stephanie.
The 2014 Via Christi Oncology Services annual report highlights many of the clinical and technological advancements made during the 2013 year while emphasizing the programmatic growth of oncology services. As new goals are established, let’s celebrate some of the program successes in 2013.

- American College of Surgeons (ACOS) Commission on Cancer (CoC) Standards reviewed quarterly for 2015 accreditation survey
- CoC partnership with the American Cancer Society with 348 total patients served at Via Christi Hospital St. Francis
- Philanthropic donations/fundraising effort providing massage therapy to cancer patients on unit and exercise rehabilitation for Via Christi patients transitioning from inpatient to outpatient
- Wichita Community Clinical Oncology Program (WCCOP) awards: NCI accrual, Quality-Research Bases. WCCOP accruals: 784
- Via Christi Blood and Marrow Transplant Center submitted program information to the Foundation for the Accreditation of Cellular Therapy (FACT) to begin the re-accreditation process
- Radiation therapy equipment upgraded
- Cancer Registry: 1,653 patients
- Oncology Patient and Family Advisory Board chartered
- Awarded the Department of Health and Human Services grant for insurance navigation programs in the Wichita community
- Created an oncology nurse navigation program to oversee the insurance navigation project and education, screening and prevention services
- Cancer Outreach, as determined by ACOS, completed two community screenings:
  - Fecal occult blood test kits in March 2013
  - Skin cancer screening and sun damage awareness

Oncology Services goals in 2013 included: key performance indicators to include patient satisfaction in excellence and frontline leadership and physician engagement in human dignity, Blood and Marrow Transplant Center of Kansas quality report and program oversight, infection rate decrease, and fall index.

We believe you will enjoy reading the Via Christi Oncology Services annual report. The Cancer Committee welcomes any questions or requests regarding the comprehensive services that we provide to our patients, providers and community.

Sincerely,

Thomas Schulz, MD and Keisha Humphries, MHCL, BSN, RN, OCN

Quality management activities

Patient care evaluation study

Hospital-acquired infection performance improvement team project

This study focused on infection rates for the Via Christi Cancer Institute, including the central line-associated bloodstream infection (CLABSI) rate of occurrence. A monthly goal was to decrease infection occurrence. There were six occurrences in the first quarter of 2013, two in the second quarter, three in the third quarter and five in the fourth quarter. To further lower CLABSI rates, Via Christi purchased a Xenex machine to eliminate infection spores.

Hand hygiene

A point prevalence study was conducted using Curos Caps to replace the 15-second scrub. A goal for the unit was to increase from 60 percent compliance to 75 percent at the end of the fiscal year. This goal was met at 76 percent.
**Cancer Registry** performs as an information system designed to manage and analyze data on persons with a cancer diagnosis. Data for all Via Christi cancer patients is submitted for incidence, trend and survival analysis to the Kansas Cancer Registry at the University of Kansas Medical Center and the National Cancer Data Base at the American College of Surgeons Commission on Cancer.

Cancer registries ensure that complete, accurate and timely abstracting is achieved for each patient that is diagnosed and/or treated at Via Christi Hospitals. Patient demographics, primary site, histology, stage of disease, treatment and outcomes are retrieved. The data collected is then analyzed and reported for the purpose of education, research and outcome measurements. The information collected by cancer registries enables public health professionals to better understand and address the cancer burden. Registry data are critical for targeting programs focused on risk-related behaviors such as tobacco use and exposure to the sun, or on environmental risk factors like radiation and chemical exposures. Such information is also essential for identifying when and where cancer screening efforts should be enhanced, and for monitoring the treatment provided to cancer patients. In addition, reliable registry data are fundamental to a variety of research efforts, including those aimed at evaluating the effectiveness of cancer prevention, control or treatment programs.

The registrars work closely with physicians, administrators and researchers to provide support for the cancer program and ensure compliance with the CoC cancer program standards. Each patient is provided a lifetime follow-up service that serves as a continuing monitor for diagnostic and treatment results, as well as a reminder to physicians and patients that regular post-treatment examinations are needed. The follow-up rate is 90 percent for all patients placed in the database since Jan. 1, 1996. This percentage stayed at or above 90 percent for 2013.

A total of 1,880 cancer cases were accessioned in 2013, 1,653 of them new cases. Most were from Kansas, with a few from Oklahoma, Missouri, Texas and Colorado.

**Five-year comparison cancer occurrence**

The number of new cases at Via Christi over the last five years is compared below. In 2012 it was reported that the number of prostate cancers were reduced. In 2013, there were no significant increases or decreases in sites reported compared to 2012.

**Male vs. female cancer occurrence**

- Bronchus and lung — 183
- All other sites — 198
- Prostate — 108
- Colon and rectum — 109
- Urinary and bladder — 59
- Leukemia — 14
- Kidney and renal — 34
- Non-Hodgkin lymphoma — 31
- Pancreas — 24
- Oral cavity and pharynx — 16
- Melanoma — 12

**Five most frequent sites for cancer occurrence**

The five most frequent sites seen for cancer occurrence in patients at Via Christi Hospitals in Wichita during the year were lung, prostate, breast, colorectal and hematopoietic disorders. Lung, colorectal, prostate and breast cancer made up the greatest percentage of cases.
In addition to incidence reporting, the Registry plays an active role in coordinating bi-weekly cancer conferences. Cancer conferences are integral to improving the care of cancer patients by providing National Comprehensive Cancer Network guidelines and a multidisciplinary physician team approach to the patient management process and outcomes, as well as education to physicians and other staff in attendance.

During 2013, 27 multidisciplinary tumor board conferences were conducted. Since 2004, the conferences have been combined, presenting cases from Via Christi Hospital St. Joseph and Via Christi Hospital St. Francis. Coordinated by Dr. Thomas Kluzak, the combined conferences are held at St. Francis. Primary moderators at St. Francis included Ted Ho, MD; Steve Hwang, MD; Camelia Alvares, MD; Chuen-Huey Lai, MD; Joel Alderson, DO; Thomas Kluzak, MD; and Faye Chang, MD. Primary moderators at St. Joseph included James Farley, MD; Irene Chang, MD; and Lidia Manouilova, MD. Physicians earn 1.0 AMA PRA Category 1 Credit™ for attending a tumor board conference. In the conferences at St. Francis, 215 cases (13 percent of Via Christi Cancer Center’s total analytic case load) were presented. Primary and multiple sites were reviewed.

### Additional cancer conferences

Via Christi Hospital St. Francis also hosts a weekly Blood and Marrow Transplant Center of Kansas conference. During 2013, 36 conferences were conducted, which included 105 patients reviewed. Most of the patients were reviewed several times within the year for progress of their disease and suitability for blood and marrow transplant. The blood and marrow transplant meetings were directed by Bassam Mattar, MD; Dennis Moore Jr., MD; Phu Truong, MD; and Pavan Reddy, MD.
Via Christi Cancer Institute is supported by a robust clinical trial program through WCCOP. WCCOP is one of 47 Community Clinical Oncology Programs supported by the National Cancer Institute to advance the science of cancer research. During the past 30 years, the WCCOP has established an excellent track record with clinical research accomplishments recognized by NCI peers and others in the cancer research community.

Via Christi Health is the fiscal agent for WCCOP and provides administrative and financial support for this NCI grant-funded program. Clinical trial patients served at Via Christi Cancer Institute receive cutting edge radiation and chemotherapy treatments for a wide variety of malignancies, including brain cancer, breast cancer and leukemia. WCCOP is also proud to partner with Cancer Center of Kansas, Lawrence Memorial Hospital and Associates in Women’s Health in order to support cancer research in urban and rural areas across Kansas. While approximately 33 percent of Kansas’ population lives outside of urban areas, the WCCOP is able to boast 18 percent clinical trial accrual due to the amazing support of physician investigators and clinical research staff (Institute for Policy and Social Research, 2013).

As cancer research turns to precision medicine that attempts to match treatment to targeted cancer mutations, WCCOP is able to fully support this endeavor with submission of tissue, blood, urine and stool specimens to biospecimen banks for current and future research initiatives. Via Christi Health is a major contributor in this field of research by assisting to prepare and submit specimens for specialized testing on an almost daily basis.

Wichita Community Clinical Oncology Program

Via Christi Cancer Institute is supported by a robust clinical trial program through WCCOP. WCCOP is one of 47 Community Clinical Oncology Programs supported by the National Cancer Institute to advance the science of cancer research. During the past 30 years, the WCCOP has established an excellent track record with clinical research accomplishments recognized by NCI peers and others in the cancer research community.

Via Christi Health is the fiscal agent for WCCOP and provides administrative and financial support for this NCI grant-funded program. Clinical trial patients served at Via Christi Cancer Institute receive cutting edge radiation and chemotherapy treatments for a wide variety of malignancies, including brain cancer, breast cancer and leukemia. WCCOP is also proud to partner with Cancer Center of Kansas, Lawrence Memorial Hospital and Associates in Women’s Health in order to support cancer research in urban and rural areas across Kansas. While approximately 33 percent of Kansas’ population lives outside of urban areas, the WCCOP is able to boast 18 percent clinical trial accrual due to the amazing support of physician investigators and clinical research staff (Institute for Policy and Social Research, 2013).

As cancer research turns to precision medicine that attempts to match treatment to targeted cancer mutations, WCCOP is able to fully support this endeavor with submission of tissue, blood, urine and stool specimens to biospecimen banks for current and future research initiatives. Via Christi Health is a major contributor in this field of research by assisting to prepare and submit specimens for specialized testing on an almost daily basis.

WCCOP objectives:

- To stimulate quality medical care through participation in treatment protocols for cancer patients in Wichita, south central, southwest and northeast Kansas, a patient population that otherwise would be underserved because its geographical location is remote from comprehensive cancer centers
- To increase the accrual of patients on adult NCI treatment, cancer prevention and control protocols, and cancer care delivery research, thus reducing the time necessary to answer critical questions and speeding the transfer of the latest research findings to the community level
- To continue to ensure quality and timely data collection while also continually implementing measures to protect clinical trial participant safety
- To continue to facilitate the involvement of underserved Kansas minority, young adult and rural populations in treatment, cancer prevention and control and cancer care delivery research
- To bring a multidisciplinary approach to the clinical trials arena and clinical decision-making, with an emphasis on collaboration of care

Note: In 2014, the Wichita Community Clinical Oncology Program was replaced by the Wichita NCI Community Oncology Program.
ensures that patients and their families are surrounded by highly skilled professionals who work together to craft individualized care for each patient.

Complications associated with a malignancy and its treatment may affect a wide variety of systems in which staff work in cooperation with the Blood and Marrow Transplant Center, jointly operated by Via Christi, Cancer Center of Kansas and the American Red Cross. Services are provided through an individualized plan of care utilizing the nursing process.

The comprehensive care of patients is provided in collaboration with primary care doctors, surgical specialists and radiation oncologists. A team of highly-trained individuals within the hematology and oncology department work in collaboration to perform the highest level of care. Via Christi Cancer Institute nurses are encouraged to obtain their oncology nurse certification, which is accredited by the National Commission for Certifying Agencies and the Accreditation Board for Specialty Nursing Certification, and equips them with advanced training in the care of patients with cancer. The Cancer Institute also works closely with a registered dietician to maintain proper nutrition before, during and after cancer treatment. While the medical oncologist/hematologist specializes in cancer and/or blood-related disorders and oversees chemotherapy and other medical treatments as appropriate, nurse practitioners and physician assistants work with doctors to diagnose and treat illness, offer preventive care, prescribe medication and educate patients about their illness and treatment.

Amenities include CD players, DVD players and a variety of DVDs to help patient and families pass the time and stay connected. Other amenities include Internet access, laundry facilities, family sleep rooms, family area that contains a refrigerator and microwave, massage and yoga therapy, and a movie theater.

This year there was strong focus on patient safety, hand hygiene, safety huddles at every shift and patient-centered care. Bedside report has replaced traditional face-to-face report that previously did not involve the patient. Communication is improved as the patient is introduced to the staff now assigned to their care. Patients are included in report and are encouraged to ask questions and provide feedback as needed. Bedside report improves safety as a tubing reconciliation is done between the oncoming and off-going RNs. We believe this combination of research, education and clinical treatment helps ensure that care provided is on the cutting edge.
Via Christi’s Blood and Marrow Transplant Center of Kansas is the only program in south-central Kansas accredited by Foundation for the Accreditation of Cellular Therapy (FACT), which sets the international standard for transplant programs. The program participates in nationally recognized clinical trials for peripheral blood stem cell transplants and is approved by the Southwest Oncology Group as a transplant site for clinical trials. The program performed 36 transplants in 2013 and continues to have patient referrals from throughout Kansas.

In 2013, the Via Christi Blood and Marrow Transplant Center of Kansas:
- Performed 32 autologous peripheral blood stem cell transplants and four allogeneic peripheral blood stem cell transplants
- Served as an apheresis center for the National Marrow Donor Program. Donors are harvested at Via Christi Hospital St. Francis and their cells are delivered to the matching recipients throughout the world.
- Coordinated 55 peripheral blood stem cell harvests that were performed by our transplant program partner, the American Red Cross. The cells obtained from these harvests are processed by the Via Christi Bone Marrow and Flow Laboratory.
- Submitted program information to FACT to begin the re-accreditation process.

The transplant Quality Management Program continues to evolve, and monitors processes and improves functioning in all aspects of the program. A specific focus for 2014 will be to meet with various insurance companies to become a provider of transplant services so that patients may benefit from obtaining treatment in their community setting.

“With the Via Christi Cancer Institute, we have a facility that reflects the continuum of that great care, with attention to patients’ medical needs and support for their families that patients will see throughout their hospital stay,” says Bassam Mattar, MD, program medical director of the Blood and Marrow Transplant Center of Kansas, shown here consulting with his patient, Jeslyn Woods.
Via Christi is on the leading edge of equipment and cancer treatment technology. The Radiation Oncology department at Via Christi is staffed by two board-certified radiation oncologists extremely knowledgeable in the most up-to-date cancer treatment methods and protocols.

The radiation oncologists work closely with a team of full-time professionals consisting of nurses, medical physicists, dosimetrists, therapists, and administrative staff — all registered and/or board certified in their respective disciplines.

The full spectrum of radiotherapy procedures is available, including external beam radiotherapy from three linear accelerators, image-guided fractionated stereotactic radiotherapy utilizing a special ExacTrac® motion detection system and high-dose brachytherapy.

Using its unique robotic mobility and continuous image guidance, the CyberKnife® follows the target throughout the treatment, intelligently delivering treatments with sub-millimeter precision. Using a true robotic manipulator and a compact, lightweight linear accelerator, the CyberKnife is versatile and can deliver beams from thousands of non-coplanar, isocentric or non-isocentric angles. Treatments have excellent tumor coverage, steep dose gradients and tight dose conformality regardless of target shape. The system tracking capabilities eliminate the need for gating techniques and restrictive head frames, providing greater comfort for the patient.

Patient satisfaction scores were evaluated in 2013 in an effort to provide exceptional service to the patients and their families using our services. The goal of 90 percent satisfaction was met in January 2013 at 91 percent, and stayed consistent throughout the year with a mean average of 92.1 percent.
Oncology insurance navigation
In August 2013, Ascension Health received a grant from the Department of Health and Human Services for health insurance navigation programs in the communities of Via Christi hospitals and Providence Hospital in Mobile, Alabama. Via Christi proposed a different approach to insurance navigation by including a focus on oncology screening and prevention services. Each individual signing up for insurance through our program received information and education on appropriate screening and cancer prevention.

From August to December 2013, the insurance navigators assisted 443 individuals and enrolled 123 into an insurance plan.

Oncology nurse navigation
In accordance with the receipt of the insurance navigation grant, Oncology hired an oncology nurse navigator to oversee the insurance navigation project, as well as education, screening and prevention services. The nurse navigator started in September 2013 and is a licensed advanced practice registered nurse and clinical nurse specialist, certified in oncology.

The nurse navigator’s main focus is to assist in the education of newly diagnosed, progressed or recurrent patients to ensure he/she fully understands his/her diagnosis, treatment and follow-up, and is provided with the opportunity to be an active part of his/her plan of care.

Resource centers
Via Christi offers two comprehensive patient resource libraries that are open to patients, their families, staff members and the community at large. All provided resources are evaluated and chosen for appropriateness by the oncology nurse navigator.

Outpatient Cancer Resource Center
Via Christi Cancer Center
817 N. Emporia
- Staffed by volunteers two afternoons per week. A nurse navigator is available on an as-needed basis.
- Professional assistance with cancer-related questions is offered in a cozy environment.
- Disease-site specific material addressing cancer related to all major organs is available free of charge.
- Access to computers for use by patients to review and utilize online resources.
- Physical, emotional and spiritual needs of cancer patients and caregivers are met through classes at the Cancer Resource Centers, which include Advanced Directives and Introduction to Lymphedema. The date and time held is published in Via Christi Life magazine.
- A direct connection with the following community cancer organizations is offered: American Cancer Society, US TOO Prostate Support Group, Leukemia and Lymphoma Society, Susan G. Komen for the Cure and Victory in the Valley.

Inpatient Cancer Resource Center
Via Christi Cancer Institute
929 N. St. Francis, seventh floor
- Disease-site specific material addressing cancer-related information involving any of the major bodily organs
- Access to computers connected to printers for research purposes
- Materials on community support systems available

“...What started out as the end of the world was full of hidden blessings,” Mandi Reddig, left, says of her friendship with Carol Belles and other cancer survivors. “I have a much more positive outlook on life.”

Carol and Mandi continue to attend the support group where they met, providing hope for others whose journey is only beginning.
Cancer Outreach and Prevention activities

- **Susan G. Komen Race for the Cure** — Via Christi is a sponsor with hospital-wide teams supporting the Susan G. Komen Breast Cancer Foundation.

- **2013 free skin cancer clinic community screening** — Too much time in the sun? In 2013, 287 community patrons were screened identifying two potential melanomas, 35 suspected non-melanoma lesions and 83 premalignant lesions. Total number of suspicious spots and moles: 120. Ten providers and 50 volunteers were part of this initiative.

- **American Cancer Society** — Personal Health Manager kits, provided by the American Cancer Society, are provided to all new patients seen through the Via Christi Cancer Center.

- **Colorectal Community Screening Initiative**
  - The Colorectal Community Screening Initiative began in March 2007 in partnership with the American Cancer Society and Walgreens pharmacies, providing free fecal occult blood test (FOBT) kits to patrons in the Wichita area. The Outreach and Prevention department received a grant from Via Christi Volunteers, Partners in Caring and has continued to be a financial supporter for this free community screening.

  - The 2013 screening resulted in 505 community patrons returning FOBT kits to AMS Laboratories for processing. Seven participants tested positive for blood in their stool. Each of the participants receiving positive results were personally contacted by the oncology nurse navigator to discuss the implications and provided with resources for following up with a physician.

- **This community health project was made possible not only through the previously mentioned grant from Via Christi Volunteers, Partners in Caring but through valuable partnerships with the American Cancer Society, AMS Laboratories, local Walgreens pharmacies and Via Christi Cancer Outreach.**

- **Victory in the Valley** — Sponsor for the East Meets West Walk/Run benefitting cancer patients, survivors, caregivers and public supporters. Via Christi partnered with Victory in the Valley to provide oncology-specialized speakers at support groups, including the oncology nurse navigator and the oncology service line administrator.

- **Look Good ... Feel Better** — Women learn how to cope with appearance-related side effects that cancer treatment can cause. Free program provided by the American Cancer Society and hosted by Via Christi.

For more information on community support groups and activities available to all cancer patients and their families, please call the Via Christi Cancer Resource Center at 316-268-6830.

  Data specialist

As a registered nurse at Via Christi Blood and Marrow Transplant Center, Stephanie Rader, right, has cared for many battling cancer. As a breast cancer survivor herself, she can attest to the value of support in making it through.
Via Christi offers a continuum of care from the birth of a child to enhancing the lives of older adults. This program or service is part of Via Christi Hospitals Wichita, Inc. Via Christi is an Equal Opportunity (EOE) and Affirmative Action Employer. We support diversity in the workplace.
